Assignment Title:	Artificial Intelligence: The Academic Benefits of Using Artificial Intelligence Among Students in Private Universities in Bangladesh.		
Assignment No:	02	Date of Submission:	26 May 2025
Course Title:	Business Communication		
Course Code:	ENG103	Section:	AA
Semester:	Spring	2024-25	Course Teacher: Hakima Akter Rupa

Declaration and Statement of Authorship:

- I/we hold a copy of this Assignment/Case-Study, which can be produced if the original is lost/damaged.
- This Assignment/Case-Study is my/our original work and no part of it has been copied from any other student's work or from any other source except where due acknowledgement is made.
- No part of this Assignment/Case-Study has been written for me/us by any other person except where such collaboration has been authorized by the concerned teacher and is clearly acknowledged in the assignment.
- I/we have not previously submitted or currently submitting this work for any other course/unit.
- This work may be reproduced, communicated, compared and archived for the purpose of detecting plagiarism.
- I/we give permission for a copy of my/our marked work to be retained by the faculty for review and comparison, including review by external examiners.
- I/we understand that Plagiarism is the presentation of the work, idea or creation of another person as though it is your own. It is a form of cheating and is a very serious academic offence that may lead to expulsion from the University. Plagiarized material can be drawn from, and presented in, written, graphic and visual form, including electronic data, and oral presentations. Plagiarism occurs when the origin of their material used is not appropriately cited.
- I/we also understand that enabling plagiarism is the act of assisting or allowing another person to plagiarize or to copy my/our work.

* Student(s) must complete all details except the faculty use part.

** Please submit all assignments to your course teacher or the office of the concerned teacher.

Artificial Intelligence: The Academic Benefits of Using Artificial Intelligence Among Students in Private Universities in Bangladesh.

Computer Science & Engineering Department
American International University-Bangladesh
Dhaka, Bangladesh

Abstract- The study explores how Artificial Intelligence (AI) enhances students academic performance in private universities. AI is gradually becoming a vital tool in education, offering personalized learning experiences, improving engagement, and supporting academic success. The research investigates the impact of AI-based tools such as virtual assistants, smart tutoring systems, and automated grading on students' learning processes and outcomes. The survey was conducted among students at private universities to gather insights into their usage, perceptions, and experiences with AI in academics. The questionnaire included items related to AI's role in learning support, academic improvement, and overall satisfaction with AI-driven tools. Results show that students benefit from quicker feedback, tailored learning paths, and increased motivation when effectively using AI tools. However, some concerns were raised about over-reliance on technology and data privacy. The study emphasizes the importance of responsible AI integration to maximize its benefits and ensure equitable access for all students.

I. INTRODUCTION

Background Information

Artificial Intelligence (AI) is transforming various industries, including education. In higher education, tools such as virtual assistants, smart tutors and auto-grading systems are employed to personalize learning experiences and streamline administrative tasks.[1]

In Bangladesh, private universities are at the lead of AI adoption due to their flexibility and emphasis on innovation[1]. Students are increasingly utilizing AI to access learning materials, receive feedback and track their progress. In this competitive and technology-driven environment, it is both relevant and necessary to study how AI impacts academic performance.

B. Overview

This research examines the influence of AI tools on students performance, engagement and motivation at private universities in Bangladesh. It surveys student experiences, usage patterns and opinions to identify both the benefits and concerns associated with AI. The goal is to promote the responsible and effective integration of AI in education[3].

II. Methodology

Study Purpose and Plan

The purpose of this study was to examine the academic benefits of using Artificial Intelligence (AI) tools among students in private universities in Bangladesh. The research aimed to understand how AI technologies influence students learning processes, engagement, and academic performance[1]. A quantitative survey method was selected to collect data directly from the university. This made it easy to take a closer look at their experiences and perceptions. The study was conducted for one week, during which responses were collected through a structured online questionnaire.

Survey and Participant Structure

Participants in the study were undergraduate students enrolled in various private universities in Bangladesh, including but not limited to AIUB, NSU, IUB, and DIU. A total of 40 to 50 students were selected using a convenience sampling method, which allowed easy access to respondents while ensuring a diverse representation of fields of study and academic levels. Participation was voluntary. To maintain ethical standards, anonymity and confidentiality were assured, and participants were allowed to withdraw at any point.

The survey was distributed via Google Forms. It was designed to take 3 to 5 minutes to complete, ensuring high response rates without burdening the participants.

Survey Content

The questionnaire contained 15 to 20 questions, combining multiple-choice items, Likert scale ratings (e.g., agreement or satisfaction levels), and one open-ended question. It collected information on students' university affiliation, semester, field of study, frequency and type of AI tool usage, perceived academic impact, and future intentions. The survey also explored concerns such as data privacy and over-reliance on technology.

Analytical Techniques

Survey responses were compiled into a spreadsheet for analysis. Descriptive statistics, such as frequency counts and percentages, were calculated to summarize multiple-choice and rating responses. Mean scores were derived for Likert scale questions. Data visualization tools, including bar graphs and pie charts, were used to illustrate findings clearly. For the open-ended question, thematic analysis was conducted to identify recurring ideas or concerns related to the use of AI in education.

III. RESULTS AND DISCUSSION

Analytical Result:

It can be observed from figure-1 that over 80% of students agreed that AI tools make learning more interesting.

Figure 1. The number of individuals who believe AI tools make learning more interesting or engaging.

Figure-2 indicates that most students use virtual assistants such as ChatGPT or Google Assistant. A smaller group also uses smart tutoring platforms

Figure 2. Types of AI tools used

Figure-3 indicates that more than half of the respondents reported using AI tools every day or a few times a week, indicating high engagement with such tools for academic purposes.

Figure 3. Frequency of AI tool use

Figure-4 illustrates that most students reported being Very Satisfied or Satisfied with the support provided by AI tools in their studies.

Figure4. Satisfaction with AI tool support

Figure-5 shows that the most improved skills were time management and critical thinking, highlighting the impact of AI tools on cognitive and organizational

abilities.abilities.

Figure 5. Academic skills improved

B. Discussion

The survey results indicate that a majority of students in private universities in Bangladesh are actively using AI tools for academic purposes, with 80% reporting usage and 70% showing moderate to high familiarity. Most students perceive AI as effective in improving academic outcomes, with 75% rating AI tools as effective or very effective. Additionally, 80% of respondents support the integration of AI into university curricula, and nearly half are very likely to continue using these tools in the future.

Despite these positive responses, concerns were raised about over-reliance on AI, data privacy, and accessibility. Around 40% of students worried that too much dependence on AI could reduce critical thinking, while others highlighted risks to data security and unequal access.

Overall, students recognize the academic value of AI but stress the need for responsible use, proper training, and ethical oversight to ensure long-term benefits.

IV. CONCLUSION

This study examined the academic benefits of Artificial Intelligence (AI) tools among students in private universities in Bangladesh. The results showed that AI is widely used and positively viewed by students, contributing to improved academic performance. Benefits reported included personalized learning, faster feedback, and increased motivation. Most students supported integrating AI into university curricula. However, they also expressed concerns about over-reliance on AI, data privacy, and limited accessibility. These findings highlight the need for

careful planning to ensure responsible and equitable implementation of AI.

A. Limitations

The study had several limitations. The sample size was small, consisting of only 40 to 50 students, which may not represent the wider student population. Convenience sampling might have introduced bias and limited response diversity. The focus was solely on undergraduate students, excluding insights from postgraduate students, faculty, or administrators. Additionally, reliance on self-reported data may have affected the accuracy of the results due to potential biases or misunderstandings.

B. Suggestions

To enhance this study, future research should involve a broader and more diverse group of students, along with interviews to gain deeper insights. Universities must provide adequate training on the ethical use of AI, address privacy concerns, and ensure equitable access for all students. Clear guidelines are essential to promote responsible and balanced use of AI in academics, while avoiding over-dependence on technology.

Acknowledgement

We would like to express our sincere gratitude to everyone who contributed to the successful completion of this research paper. First and foremost, we extend our heartfelt thanks to our respected course instructor **Hakima Akter Rupa**, Assistant Professor at AIUB, for her constant guidance, support and valuable feedback. Her encouragement and thoughtful suggestions greatly improved the quality of our work. We are also genuinely thankful to all the students who participated in the survey your honest responses and time played a vital role in making this research possible.

APPENDIX

1.

Which private university are you currently studying at?
42 responses

2.

What is your current level of education?
42 responses

3.

What is your major or field of study?
42 responses

4.

Do you feel AI tools make learning more interesting or engaging for you?
42 responses

5.

How often do you use AI tools for academic purposes?
42 responses

6.

How satisfied are you with the support AI tools provide in your studies?
42 responses

7.

Do you agree that AI tools help you stay engaged with your academic activities?
42 responses

8.

When you use AI tools, do you feel more confident in your academic work ?
42 responses

9.

Which academic skill do you think has improved the most because of using AI tools?
42 responses

10.

What are your concerns or difficulties with using AI tools for learning?
42 responses

11.

Which academic skill do you think has improved the most because of using AI tools?
42 responses

12.

How concerned are you about your personal data being used when you use AI tools?
42 responses

13.

which areas do you mostly use AI tools to support your studies?
42 responses

14.

What is your plan to keep using AI tools in the future to support your studies?
42 responses

15.

Which AI tools do you use to help with your studies?
42 responses
